

HW-9 low voltage water alarm 9 VDC

A low voltage high water alarm which comprises a water sensor connected by 6ft of wire to an audible alarm.

Powered by 9-volt battery (not included), the 85-decibel alarm can sound for 3 days.

TO ACTIVATE

1. Remove the cover from the battery compartment, located on the back side of the alarm, and extend the wires and the connector that are inside.
2. Snap a new 9-volt battery (alkaline recommended) onto the connector and place the battery back in the compartment, and then replace the cover.
3. Before mounting the alarm, we recommend that you test it first to ensure the unit is working properly. Check by pressing the Test/Reset button on the side of the unit once (see below).

PLACEMENT

Place the sensor (suction cup up) above the activation level of the pumps. Mount the alarm up to 6 feet away (anchors and screws included). Secure sensor in place with adhesive if needed.

RESET

To silence the alarm, reset the unit to monitor mode by pressing the Test/Reset button twice.

LOW BATTERY SIGNAL

The alarm will monitor the strength of the battery. If the battery is low, the alarm will double beep every 20 seconds for up to 7 days. The expected life of a 9V alkaline battery in monitor mode is up to 15 months, non-alkaline battery is up to 12 months. We recommend you test it periodically.

WARNING

Long term exposure to loud sounds may be harmful to your hearing.

TESTING

We recommend you test the alarm periodically by pressing the Test/Reset button on the side of the unit once: 4 beeps indicate the battery is good and the unit is ready; 2 beeps indicate battery is low; no beep indicates battery is dead.

KEY FEATURES

- Remote sensor detects water and sounds alarm
- Sensor and alarm connected by 6 feet (1.8 m) of wire
- Solid state electronics powered by 9-volt battery (not included)
- 85 decibel alarm sounds for 3 days
- Low battery check and a test bar for a system check
- Comes with screws and wall plugs for wall mounting
